

14.7.5 Nasogastric Tube Management Chart

Surname:
First Name:
D.O.B

NGT Tube Comments: Bridle securement devices need to be changed every 30 days per manufacturer recommendations.

PH testing: A gastric PH of less than or equal to 5 indicates correct gastric placement for initial placement. NOTE: PH testing is limited when continuous feeding or acid suppression therapy is in place. Escalate to ICAH management for assistance with mobile X- ray for imaging to verify placement.

NOTE: Observe NGT after client repositioning and activities.

DATE & TIME	Length to Hub (cm mark)	Tube Observation (coiling in mouth Y/N)	NGT Insertion date (Note change due date)	NGT insertion verification Method	Securement Device in Place Y/N	Bridle/securement device change date (Note change due date and record when changed)	Pressure area noted Y/N/description	Spare NGT & securement device available Y/N	Name & Signature
